Addresses and movements of funds

Notional Pte. Ltd. v Persons Unknown

Summary of the records in this folder, prepared 26 September 2026

This note follows wallet addresses and the value that moved through them. It is drawn from the May 2024 Singapore filings, the Chainalysis narrative exhibited with Jacob Gadikian's affidavit, and the two Binance account productions. A public Osmosis node was then queried on 26 September 2026 for the two wallets that kept paying one of those Binance deposit addresses. Figures from the pleadings are the claimant's figures as of 7 May 2024. Figures from the workbooks are Binance's ledger. The 2026 figures are chain entries, and that node's index does not contain the 2024 transactions.

What the folder adds to the May 2024 pleadings

The pleadings name Binance and KuCoin only as the places where two 10 TIA test deposits and 152.5 ATOM landed. They do not name an account. The workbooks do.

Binance user 800463342, opened and identity-checked on the afternoon of the Celestia transfer, received the 10 TIA and sold them for dong the same evening.

Binance user 53164342 received the 152.5 ATOM. Sixteen minutes earlier that same account had sent 0.1 ATOM to the wallet the ATOM came from. Nine minutes after the stolen ATOM arrived, 1,706.64 USDT left the account as an internal transfer to Binance user 11738338.

The same account then passed through further ATOM, OSMO, ETH, DYM and USDT from wallets that are not in the pleadings. Two of those wallets, osmo1tp50… and osmo1kfzdt…, were still paying the account's Osmosis deposit address in June, July, August and September 2026, every time with memo 100603137. The indexed payments total 16,981 OSMO.

The January 2024 theft, which is almost all of the pleaded 1,513,833 dollars, did not pass through either of these Binance accounts. It was bridged toward Ethereum and eXch. There is no KuCoin account file in this folder.

1. Sources and how far each one goes

The case is HC/OC 330/2024 in the General Division of the High Court of Singapore. Notional Pte. Ltd. (UEN 202226456W), of 112 Robinson Road, sued persons unknown for transfers it says were made without authority between 31 October 2023 and 6 February 2024. Resource Law LLC acted. Jacob Anthony Gadikian's affidavit of 7 May 2024 is the factual account. Mika Dahiya's affidavit of 6 May 2024 supports the same application. The order is ORC 330.

File	What it contributes to the money trail
Statement of claim, 7 May 2024, 13 pp.	The pleaded transfers, amounts, times and the first hostile addresses.
Gadikian affidavit, 7 May 2024, 367 pp.	The three-phase dissipation, Chainalysis exhibits, the Binance and eXch correspondence, and the SPF messages.
Dahiya affidavit, 6 May 2024, 45 pp.	Corroborates the same tracing. It does not add a separate set of addresses.
Skeletal submissions, summons, Form B14, originating claim	The relief asked for. No additional hops.
ORC 330, 37 pp.	The injunction. The frozen addresses track the affidavit's Tables B and C.
Bundle of authorities, 192 pp.	Case law. No fund tracing.
User ID 53164342.xlsx	Binance production for the 152.5 ATOM memo. Identity, deposits, withdrawals, spot trades, devices, access log. Window stated on the sheet: 21 Dec 2023 to 9 May 2024.
User ID 800463342.xlsx	Binance production for the 10 TIA memo. Same sheet types. Window stated on the sheet: 29 Oct 2023 to 9 May 2024.
Why we left.pdf, 4 pp.	A staff letter. No wallet addresses. It alleges company assets were treated as a personal wallet. It is not a trace.
README.md	Names Adam Christopher Chaplin and Minh Vu Le Nhat as people about whom further material was sought. The court file names William Chaplin, and Minh Vu Le Nhat as a former infrastructure employee with access to the BitCanna wallet. Neither Chaplin is tied to a receiving address in these files.

Binance's letter of 2 April 2024, exhibited in the affidavit, makes no admission that the tracing is right or that any balance was still on an account. A deposit address, in Binance's description, is assigned to one user. After a deposit is credited, the coins are swept into pooled hot wallets, and the user's claim is an account ledger, not coins sitting at the deposit address. That distinction matters. Several tables in the affidavit say stolen coins "reside" at a Binance deposit address. The ledgers show those coins had already been sold.

How to read a name in this note

A Binance identity is the person the exchange file records for that user number: the name, the identity document, the email, the phone, and the device that logged in. It is evidence of who the exchange thought it was dealing with, and of which device operated the account at the recorded minute. It is not, by itself, proof of who held Notional's keys. Accounts are bought, borrowed and shared. Where the log shows a test payment to a hostile wallet before stolen coins arrived, that is a stronger fact than the name alone, and it is stated separately.

2. What was taken, and from which addresses

The statement of claim values the pleaded assets at 1,513,833 US dollars at the time of each transfer. Two clusters of addresses do almost all of the work. Notional's recovery destination is one key, the same 20-byte address published under a different prefix on each chain, labelled 1083 in the affidavit. The main hostile destination is a second key, labelled 1r0ct, again one key across Celestia, Sei, Stargaze, Cosmos and Osmosis. The December BitCanna path uses a third key, labelled 1dl7. Reading the prefixes this way is the same grouping the affidavit already uses. It is set out here because later hops only make sense if 1r0ct on Osmosis is the same key as 1r0ct on Celestia.

Notional addresses the affidavit treats as the company's

Label	Chain	Address
16dc	Celestia	`celestia16dc379m0qj64g4pr4nkl7ewak52qy2srcsh04u`
1c35	Celestia	`celestia1c35msmpu8pdsgaaznt16x6xmlpl40l3tnw076q`
1dl7	BitCanna	`bcna1dl7w3myyfmnarh0t5uxmy7qe6szagz3ka2nq42`
1083	Celestia	`celestia1083svrca4t350mphfv9x45wq9asrs60ce9xvfv`
1083	Sei	`sei1083svrca4t350mphfv9x45wq9asrs60c9rx24q`
1083	Stargaze	`stars1083svrca4t350mphfv9x45wq9asrs60cunqpcs`
1083	Cosmos	`cosmos1083svrca4t350mphfv9x45wq9asrs60cg0hunp`
1083	Osmosis	`osmo1083svrca4t350mphfv9x45wq9asrs60cq5yv9n`
1083	Akash	`akash1083svrca4t350mphfv9x45wq9asrs60c956m2m`

Celestia 1c35 is the address former employees moved 9,008 TIA to. It is not pleaded as a hostile address. Akash 1083 is the address that later received 6 AKT back from a hostile wallet.

Hostile addresses in the pleadings

Label	Chain	Address	Role in the pleadings
1xvxx	Celestia	`celestia1xvxx5llevesahqelt2fjssgptsc7m69vhactlh`	First stop for 9,030 TIA on 31 Oct 2023. Returned 9,009.97.
1cyl	Celestia	`celestia1cylgjyd70mheg3j3e2n7t758r07rarwytagltr`	10 TIA. Pleaded as a KuCoin deposit address. KuCoin disputed that.
1fd3	Celestia	`celestia1fd3mclxp4e2fh0wpau3eg55x2fsm7yjxzg29j2`	10 TIA. Binance deposit address of user 800463342.
1dl7	Osmosis	`osmo1dl7w3myyfmnarh0t5uxmy7qe6szagz3k0ps3t2`	Received the BCNA and swapped it toward ATOM.
1dl7	Cosmos	`cosmos1dl7w3myyfmnarh0t5uxmy7qe6szagz3k86rpac`	Received about 152 ATOM from Osmosis, then sent 152.5 ATOM to Binance.
1r0ct	Celestia	`celestia1r0ctpgx6pe5s9jsemesm3vs9jvm3jgxf7re4tj`	71,810.596 TIA on 7 Jan 2024.
1r0ct	Sei	`sei1r0ctpgx6pe5s9jsemesm3vs9jvm3jgxfz9enh7`	145,499 SEI.
1r0ct	Stargaze	`stars1r0ctpgx6pe5s9jsemesm3vs9jvm3jgxfm4lc6w`	218,900.198 STARS and the Bad Kid NFTs.
1r0ct	Cosmos	`cosmos1r0ctpgx6pe5s9jsemesm3vs9jvm3jgxf0fg93l`	21,745.85 ATOM, taken out of bond by liquid staking.
1r0ct	Osmosis	`osmo1r0ctpgx6pe5s9jsemesm3vs9jvm3jgxf8jm48d`	Consolidation wallet, and 15,000 OSMO on 30 Jan 2024.
1zhm	Osmosis	`osmo1zhmjn600jd3ptl00xd6y38gn83m84ea2fsyxes`	18,999 OSMO on 6 Feb 2024.
1y9y	Osmosis	`osmo1y9ywn8mlsmn6jxujwh08xsevfe60t30gxfqtwe`	10 OSMO in, about 5 back. 4 OSMO left.
1y9y	Akash	`akash1y9ywn8mlsmn6jxujwh08xsevfe60t30grf7up3`	AKT from a 20 OSMO swap. 6 AKT sent back to Akash 1083.
1q0w	Osmosis	`osmo1q0w3uu5lawc343azvsls9zlr4r4zectvr85u2v`	30 OSMO in. Some OSMO sent back to Notional. Dust and 7.77 USDT left.

Who the affidavit says could touch the relevant keys: Jacob Gadikian and Ricardo Ferreira Goncalves, through DMEGA Limited of New Zealand, had the first category. Mai Gia Long, described as lead validator operator and holder of 10 percent of Notional, had the second category, from his work at the Vietnamese entity then called Cong Ty Notional Vietnam, later LnL Pte. Ltd. For the BitCanna wallet specifically, the affidavit names four people: Gadikian, Long, Du Nguyen, and Minh Vu Le Nhat. Du and Nhat had left in or around November 2023. On 4 January 2024 Ricardo sent recovery instructions and encrypted keys to Jerry Chong, described as an asset-recovery specialist, in a Signal group whose only members were Jerry, Ricardo and Jacob.

Pleaded amounts

When (UTC)	Asset	From	To	Pleaded USD
31 Oct 2023, 14:11	9,030 TIA	Celestia 16dc	Celestia 1xvxx	—
31 Oct 2023, about 16:19	10 TIA	1xvxx	1cyl, said to be KuCoin	part of 200
31 Oct 2023	10 TIA	1xvxx	1fd3, Binance user 800463342	part of 200
31 Oct 2023, about 19:13	9,009.971417 TIA	1xvxx	back to Celestia 16dc	returned
31 Oct 2023, about 19:28	9,008 TIA	Celestia 16dc	Celestia 1c35	not in the 1.51m
23 Dec 2023, 02:51	150 BCNA	BitCanna 1dl7	Osmosis 1dl7	part of 1,269
23 Dec 2023, 03:00	93,143 BCNA	BitCanna 1dl7	Osmosis 1dl7	part of 1,269
23 Dec 2023, 04:19–04:22	swap	Osmosis 1dl7	about 152 ATOM	—
23 Dec 2023, 04:23	about 152 ATOM	Osmosis 1dl7	Cosmos 1dl7	—
23 Dec 2023, 04:28	152.5 ATOM	Cosmos 1dl7	Binance cosmos1j8pp…	proceeds of 1,269
7 Jan 2024, 20:52	71,810.596 TIA	Celestia 1083	Celestia 1r0ct	1,085,776
7 Jan 2024, 20:58	145,499 SEI	Sei 1083	Sei 1r0ct	103,566
7 Jan 2024, 20:58–21:10	218,900.198 STARS and 11 Bad Kid NFTs	Stargaze 1083	Stargaze 1r0ct	9,097 + 45,798
7 Jan 2024, 21:02–21:36	21,745.85 ATOM	Cosmos 1083	Cosmos 1r0ct	212,143
30 Jan 2024, 09:25	15,000 OSMO	Osmosis 1083	Osmosis 1r0ct	26,334
6 Feb 2024, 02:27	18,999 OSMO	Osmosis 1083	Osmosis 1zhm	29,639

The 9,030 TIA on 31 October is not the sum that stayed out. All but 20 TIA came back within about five hours. The 20 TIA are the only October amount inside the 1,513,833 dollar total. The 9,008 TIA moved on to celestia1c35… are a separate allegation: the affidavit says Long and Du, then still employees, moved them “to secure” the compromised wallet, and later refused to return them. Unbonding of that stake was started more than once and cancelled. The affidavit says the company does not know who cancelled it. Those 9,008 TIA are not given a dollar line in the statement of claim.

The Bad Kid list is not stable inside the court papers. The statement of claim says eleven NFTs and names ten: 9798, 2184, 2211, 2739, 3085, 3547, 4030, 4160, 6479 and 7280. Table B of the affidavit names eleven and swaps two of them: it includes 3182 and 2547, and it does not include 3547. Both documents say the NFTs were still at Stargaze 1r0ct on the date of the filing. This summary does not try to decide which token IDs are right.

3. 31 October 2023: the 20 TIA, and the clock does not agree

The narrative affidavit times the 10 TIA to KuCoin’s pleaded address at about 16:19 UTC, and the 10 TIA to the Binance address at about 18:50 UTC. The lawyers’ letter of 8 April 2024 then puts 16:19 UTC on the Binance transaction instead. The Binance ledger is the one with a transaction hash, and the hash matches the letter, not the 18:50 timing.

Record	What it says about the Binance 10 TIA
Gadikian affidavit, p. 42	About 18:50 UTC on 31 Oct 2023, from celestia1xvxx… to celestia1fd3…
Letter of 8 April 2024, affidavit p. 174	16:19 UTC. Hash 2F5B00E688F2CC03483ACFD346CF78AA357F959E68C72C318A9602FC257BB767. Memo 103763025. Address celestia1fd3…
Binance user 800463342, deposit sheet	Same hash, same two addresses, 10 TIA, credited 31 Oct 2023 17:51:40. The access log, which Binance labels UTC, uses the same clock: the account was registered at 17:11:16.

17:51 UTC is 5:51 in the afternoon, an hour earlier than the affidavit’s 6:50 and an hour and a half later than the letter’s 4:19. The addresses, the amount and the hash are the same transfer. The pleadings have the hour wrong in one direction or the other. Public Celestia nodes queried for this note did not return that historical transaction, so the block time was not re-read from the chain. The Binance credit time is the time used below.

Binance user 800463342

Binance's letter of 11 April 2024 says the two memo IDs identified two accounts. Memo 103763025 is this one. Memo 103571931 is user 53164342, in the next section. Nothing in the May filings prints either user number, either email, or either identity-document name.

Field	As printed in the workbook
User	800463342
Email	john.doe031292@gmail.com
Name on the identity record	First name THI DINH, last name TRINH. The payment profile says TRINH THI DINH.
Nationality and identity number	VN, 036301005053
Registered	31 Oct 2023, 17:11:16
Identity check completed	31 Oct 2023, 17:19:11. Eight minutes after registration.
Status at export	Normal. Authenticator enabled. Spot balance about 2.60 USDT. No futures, fiat, card, loan or Binance Pay activity.

The whole life of the account, on the export clock

Time	What the sheets show
17:11:16	Registered from a Samsung SM-N960U, Android, IP 58.186.128.52, Hanoi.
17:19:11	Identity check marked personal and complete.
17:24–17:27	Chrome 118 on Mac OS logs in. IP 222.252.2.167, Hanoi. Device id 16987732606182WmWNTidcXwCiaGWDc2.
17:29–17:50	Repeated deposit security checks from that Mac session, then the phone.
17:51:40	10 TIA credited. Source celestia1xvxx5llevesahqelt2fjssgptsc7m69vhactlh. Deposit address celestia1fd3mclxp4e2fh0wpau3eg55x2fsm7yjxzg29j2. Hash 2F5B00E6…BB767. Valued at 22.78 USDT.
18:21–18:22	Nickname changed, from the phone.
18:36	First of many checks of the conditions for deleting the account. These continue past the cash-out.
18:59–19:01	Limit sell of all 10 TIA for 22.78 USDT.
19:21	MoMo payment method added in the name TRINH THI DINH, phone 0787820861. A taker-sell of 22.88 USDT for 560,903.20 VND against ad publisher 48888082 is cancelled by the system at 19:36.
19:40	VietinBank payment method added. Name TRINH THI DINH, branch Hai Ba Trung, account 105870482671.
19:40–19:45	Taker-sell of 20.31 USDT for 499,849.41 VND at 24,611 VND per USDT. Completed. Ad publisher, the buyer of record, is Binance user 13718875. Client: Android.
19:46 through 1 Nov 16:46	Nineteen checks of account-deletion conditions, from the phone and from IP 118.71.135.184. Also an email-change event, an unbind of a mobile number, a phone bind, and an attempt to turn on a master-account function. No child account appears in the sheets. No withdrawal row exists at all.

About 2.47 USDT of the 22.78 never went out through the completed P2P trade. The snapshot balance is 2.595 USDT. There is no second deposit. The account's access log runs only from 31 October to 1 November 2023: 89 events, all geolocated by Binance to Hanoi, four IP addresses, two devices. No IP address and no device identifier in this file also appear on user 53164342.

Correction to Table B

Table B says 10 TIA still resided at celestia1fd3…, operated by Binance, on 7 May 2024. The ledger says those 10 TIA were sold on 31 October 2023 and that 20.31 USDT was paid out in dong the same hour. By the May snapshot the account held about 2.60 USDT. The deposit address was the door, not the place the value stayed.

The other 10 TIA, to celestia1cylgjyd70mheg3j3e2n7t758r07rarwytagltr, is the KuCoin leg. KuCoin's email of 23 April 2024 said that address was not KuCoin's and asked for the transaction hash. Counsel sent a hash. The affidavit says there was no further reply. The claimant relies on the Chainalysis report, an X-explore / WuBlockchain article, and posts on X. There is no KuCoin workbook in this folder, and no name, email or user number for that deposit.

4. 23 December 2023: 93,293 BCNA into Binance user 53164342

On 9 December 2023 Notional unbonded BitCanna. The unbonding finished on 23 December and 93,143 BCNA became liquid in bcna1dl7…. Within minutes, 150 BCNA and then 93,143 BCNA moved to the same key on Osmosis. That key swapped them into about 152 ATOM between 04:19 and 04:22 UTC, sent the ATOM to the same key on Cosmos at 04:23, and at 04:28:50 sent 152.5 ATOM to cosmos1j8pp7zvcu9z8vd882m284j29fn2dszh05cqvf9. The chain memo, printed in the 8 April letter and in the Chainalysis notes, is 103571931. The hash is 73CFE6CE985A0F6D6FDA219313863AC98862C96691200C29E909219E83E286A1. Binance mapped that memo to user

53164342. The deposit row matches the hash, the amount, the source and the time to the second.

The account did not simply receive the coins. On the same morning, before the stolen ATOM arrived, someone using it bought a small amount of ATOM and sent a test to the hostile Cosmos wallet.

Time (UTC)	Event on user 53164342	IP on the access log
03:29:46	100 TRX deposited from TZBVW4MEXyr9K7VbusiBEttDomKYQA3C97 to the account's Tron address TAFEdiSmZehrKYvqQGZr5e8i2FEK85Lz7Q.	—
03:31:29	100 TRX sold for 10.676 USDT.	—
03:31:46	0.91 ATOM bought for 10.3103 USDT.	—
04:10:40	Withdrawal security check starts.	113.178.91.191, Hanoi, iOS
04:12:16	0.1 ATOM withdrawn on-chain to cosmos1dl7w3myyfmnarh0t5uxmy7qe6szagz3k86rpac. Hash 9A194F275D2916F40FAB4B13AADD17B2F5983C5E4B8715023D3612DDDE2E13FB. This is the wallet that will send the stolen ATOM.	same IP
04:28:50	152.5 ATOM deposited from that same cosmos1dl7… address. Valued at 1,727.825 USDT.	—
04:33:53	153.28 ATOM sold for 1,736.6624 USDT. That is the 152.5 plus the 0.81 ATOM left from the test purchase, within dust.	—
04:36:49–04:37:02	1,706.638756 USDT sent internally to Binance user 11738338. The destination field is TS9EohtikvfDXKVfEqS1VT6qJR2Nreoyj6. The transaction id is numeric, 149908202608, not a chain hash. Counterparty id 11738338.	same IP, 113.178.91.191

This is the strongest new link in the folder

The May filings identify cosmos1j8pp… as a Binance deposit address and stop there. They do not show that the receiving account first paid the sending wallet. The 0.1 ATOM left user 53164342 for cosmos1dl7… at 04:12. The 152.5 ATOM came back from cosmos1dl7… at 04:28. Both the test withdrawal and the USDT cash-out were approved from one Hanoi IP, 113.178.91.191, on iOS. That is an operator of this Binance account acting on the hostile wallet's address before the theft proceeds arrived, and moving the proceeds out nine minutes after they did.

About 30 USDT of that morning's proceeds stayed on the account. 1,706.64 USDT did not. It did not leave on a public chain. Binance recorded an internal transfer to user 11738338. That user number appears nowhere in the court papers.

Who the file says user 53164342 is

Field	As printed in the workbook
User	53164342
Email	jackiedropinnhostel@gmail.com
Name on the identity record	NGÔ TAT THÀNH, printed entirely in the last-name field. Nationality VN. Identity number 022091001713.
Phone	+84 343555828. SMS authentication number on the sheet is 343555828.
Registered	12 Oct 2020, 02:32:34, from IP 113.185.47.16.
Identity check	1 Nov 2020, 15:53:09. Personal. Status at export: Normal. Authenticator enabled.
Device name	Four early iOS devices, from October 2020 through March 2021, are named Jackie. Language vi-VN, timezone GMT+7, throughout.
Snapshot balances	About 6.55 USDT on spot and 0.15 USDT on margin. Futures wallet empty. Total estimate about 6.70 dollars. No fiat, P2P, card, loan, Binance Pay or Binance Send rows. One OTC conversion of 0.80 BUSD to FDUSD on 4 Jan 2024.

This is not a same-day account. It had been open for three years. During the export window every one of the 282 access-log rows is an iOS client, and every one is geolocated by Binance to Hanoi. The IPs change, which fits mobile data. They do not overlap the four IPs on user 800463342.

On 23 January 2024, in the WhatsApp thread exhibited with the affidavit, the Singapore Police Force investigator wrote that he had the KYC for the 152 ATOM, that the name was not on the list of present or former Notional employees, and that he believed the subject was somehow connected to the departed Vietnamese staff. He did not put the name in the chat. William Chaplin was then offered as a former employee who had been left off a spreadsheet. The investigator replied that the name was not of interest. The workbook is the first document in this folder that prints NGÔ TAT THÀNH against the 152.5 ATOM.

5. The same account did not stop at the 152.5 ATOM

From 23 December 2023 through 8 April 2024 the spot account behaves as a pass-through. Coins arrive, are sold for USDT within minutes, and USDT is sent internally to user 11738338. The sources after 23 December are not the 1r0ct or 1dl7 keys named in the claim. They are a small set of other addresses. Two of them are the same key on two chains:

cosmos1tp50znagzdk77udu4du52njxl7d77dp7g9gdzr and osmo1tp50znagzdk77udu4du52njxl7d77dp7q7ma53.

Every deposit and withdrawal in the workbook

USDT in this table is Binance's own USDT column for deposits and withdrawals, and the fill notional for the trades mentioned in the text. Internal transfers show a numeric id. On-chain withdrawals show a hash.

When	Dir	Amount	USDT	Other side

Nine of the ten USDT withdrawals are internal transfers to user 11738338, together 15,389.81 USDT of the amount field. The only on-chain cash-out in the whole sheet, other than the 0.1 ATOM test, is the 597 USDC on 27 March. The account's own deposit addresses, reused on every row for that network, are cosmos1j8pp7zvcu9z8vd882m284j29fn2dszh05cqvf9, osmo129uhlqcsvmehxgzcsdxksnsyz94dvea907e575, 0x512606186a39be2e641e460f9095f87ef342d723 on Ethereum, Dymension and BSC, and TAFEdiSmZehrKYvqQGZr5e8i2FEK85Lz7Q on Tron.

What can be tied to a single incoming payment

Some withdrawals match one deposit the same hour. Others pay out of a mixed balance, and should not be described as the proceeds of one theft.

- **23 December, direct.** The BCNA proceeds are sold and 1,706.64 USDT goes to user 11738338. About 30 USDT stays.
- **1 February, direct, and not a pleaded theft.** 2,000 USDT arrives from 0xf099c6d4355f47e704564de5021619ea305b71ed and 2,000 USDT leaves for user 11738338 an hour later.
- **31 March, direct.** 2,000 OSMO from osmo1kfzdt… is sold for 2,766.20 USDT and 2,765.62 USDT leaves thirteen minutes later.

• **12 March, nearly direct.** 0.444 ETH from 0x53182278… is sold for 1,767.10 USDT. The withdrawal twenty-seven minutes later is 1,803.88 USDT, so it also used a little of the balance already there.

• **7–8 April, direct.** 906 OSMO from osmo1tp50… is sold for 1,194.38 USDT and 1,195.65 USDT leaves the next morning.

• **6 March, partial.** 755 OSMO from osmo1tp50… sells for 1,342.09 USDT. Only 1,156.84 USDT leaves the same hour.

• **25–27 March, the reverse.** User 11738338 sends 600 USDT in. The account buys 606 USDC and withdraws 597 USDC on Ethereum to 0x29b671f938aed97d6f0a197a8a5b6e279ab0e5d7. This is the one time the cash-out counterparty pays this account, and the one time value leaves to a fresh chain address rather than back to 11738338.

• **The rest was pooled.** 105 ATOM and 141 ATOM from cosmos1tp50… on 29 December and 5 January, the three USDT deposits from TBA6CypY… (2,921.05 USDT together), 740 OSMO on 3 February, 89 DYM, 0.041 ETH and 1,490 TRX were sold and sat in spot. The 26 February and 5 March withdrawals, 4,761.17 USDT, are a sweep of that mixture. They cannot be allocated to the December ATOM theft, or to any one later deposit, from these rows alone.

About 3,090 USDT is not on any withdrawal

Adding the spot credits and subtracting the spot debits, using sale notionals and the USDT amount actually deposited or withdrawn, leaves 3,089.79 USDT unaccounted for at the end of the sheet. The export snapshot, a few weeks later, shows about 6.55 USDT in spot and a total estimate of about 6.70 dollars. Spot fees at a tenth of a percent do not explain a gap of this size. Fiat, P2P, card, Pay, Send and loan sheets are empty. The only other activity Binance recorded is futures: the access log has 116 futures-order events, 38 changes of perpetual leverage, and 17 futures cancellations, all before 11 April 2024, and the futures wallet is empty at the snapshot. There is no futures fill file, so those 3,090 USDT cannot be followed any further inside this folder. If the account already held USDT on 21 December 2023, when the export window opens, the amount that left through an unlisted channel is larger, not smaller.

Every completed withdrawal was initiated from an iOS session Binance placed in Hanoi. The IPs differ by day: 113.178.91.191 on 23 December, 116.96.47.60 on 1 February, 14.231.99.159 and 27.67.93.122 on 26 February, 27.68.137.228 on 5 March, 125.235.63.124 on 6 March, 171.246.11.84 on 12 March, 113.185.46.243 on 27 March, 113.185.44.3 on 31 March, and 117.2.113.101 on 8 April. On 19 January there are withdrawal security checks from 116.96.44.36 and 125.235.130.21 with no matching withdrawal row.

Binance’s 11 April 2024 letter says it would place temporary restrictions on the two accounts as a courtesy. No withdrawal row falls after 8 April. The account was still opened from Hanoi after that. On 3 May there are four checks of the conditions for deleting the account, the same check user 800463342 ran nineteen times. On 6 May there is one change of perpetual-futures leverage. The last login in the log is 7 May 2024 at 09:37 UTC, from 27.67.186.214, on the iPhone whose device id is 1715074666711450x8agTBgM7ugOSW2X.

Where the later deposits came from

Source	What arrived at user 53164342	In the May pleadings?
cosmos1dl7w3myyfmnarh0t5uxmy7qe6szagz3k86rpac	152.5 ATOM on 23 Dec. The BCNA path.	Yes. Hostile Cosmos 1dl7.
cosmos1tp50znagzdk77udu4du52njxl7d77dp7g9gdzr	105 ATOM on 29 Dec and 141 ATOM on 5 Jan. Together 2,609.78 USDT of value at Binance’s marks.	No.
osmo1tp50znagzdk77udu4du52njxl7d77dp7q7ma53	740 OSMO on 3 Feb, 755 on 6 Mar, 906 on 7 Apr. Together 2,401 OSMO, marked at 3,716.40 USDT.	No. Same key as the Cosmos address above.
osmo1kfzdt3apwa3wqq9enx5m3hhc085h6q88t7c2d9	2,000 OSMO on 31 Mar, marked at 2,766.20 USDT.	No.
TBA6CypYJizwA9XdC7Ubgc5F1bxrQ7SqPt	2,921.05 USDT on Tron, 11–17 Jan, in three transfers.	No.
0xf099c6d4355f47e704564de5021619ea305b71ed	2,000 USDT on BSC, 1 Feb.	No.
0x53182278b1f051952b598da49860fc394c834bc1	0.444 ETH, 12 Mar, marked at 1,767.10 USDT.	No.
0x4b51d8b2b320e65084f33954b26daf09dbef4162	89 DYM, 11 Feb, marked at 632.26 USDT.	No.
0xb50b21a88cd53b139a2f2c9bd0bcf31695d01d58	0.04137 ETH, 19 Feb.	No.
TZBVW4MEXyr9K7VbusiBEttDomKYQA3C97	100 TRX on 23 Dec, funding the test, and 1,490 TRX on 27 Feb.	No.
User 11738338	600 USDT back in, on 25 Mar.	No. This user is the destination of the cash-outs.

None of the tp50, kfzdt, TBA6, 0xf099, 0x5318, 0x4b51, 0xb50b, TZBVW or 11738338 identifiers appear in the affidavits, the claim, the summons or the order. The December and January ATOM from cosmos1tp50… also cannot be the 21,745 ATOM taken on 7 January. Those two deposits happened before that theft. Whether tp50 was paid by a Notional wallet or by 1r0ct is not shown in these files. Public nodes queried for this note no longer return the 2024 transactions, so that question was

not closed from the chain either. What the records do show is that one Binance account received the pleaded BCNA proceeds and, for months afterwards, received a separate stream from a key the pleadings never mention, and sent both onward to the same internal counterparty.

6. Those two feeder wallets were still paying the same deposit address in 2026

On 26 September 2026 the public Osmosis REST node at osmosis-rest.publicnode.com was asked for transfers sent by osmo1tp50znagzdk77udu4du52njxl7d77dp7q7ma53 and by osmo1kfzdt3apwa3wqq9enx5m3hhc085h6q88t7c2d9. The node returned 7 outgoing transactions for the first and 16 for the second, and it described those counts as the whole indexed set. Every one of them is from 2026. The 2024 deposits that Binance recorded are not in that index. Several other Osmosis endpoints, asked for the 2024 transaction hashes by id, answered that the transactions were not found. The 2024 amounts below stay on the Binance ledger. The 2026 amounts are chain entries, and they are only as complete as that node's index.

Inside that index, both wallets send OSMO to osmo129uhlqcsvmehxgzcsdxksnsyz94dvea907e575, which is the Osmosis deposit address printed on every OSMO deposit row for user 53164342. Every one of those 2026 payments carries the same memo, 100603137. A memo is not a Binance user number. The 2024 memos 103571931 and 103763025 were deposit memos, and Binance translated them into user numbers that are different from the memos. 100603137 has not been translated. There is no 2026 account disclosure in this folder, and Binance can reassign an address. The fact that is actually on the chain is narrower, and still new: the two wallets that fed this deposit address in 2024 were feeding it again in 2026, and they were using one memo.

When (UTC)	From	OSMO	Transaction
2026-06-08 04:40	osmo1kfzdt…	4,400	55A5C6C2162AEF69B62A578A87C1F340DBBE8800952CB049B872B703BE6B23FB
2026-06-14 13:57	osmo1tp50…	2,082	E7E5E57E67DD2ABDAE3006A6F0125EF5EE2EA19DC2DF73A87987908020175 88E
2026-07-19 14:48	osmo1kfzdt…	4,000	35D2102C5EED3286A7180100F47B3720DEDF9074DE9CFFB7C0FCBECA5B2C 8C67
2026-08-16 05:08	osmo1kfzdt…	3,000	0AFB808574CD4F44B0C0C0212FF01139713A05EC25213B4C9E3342B8652E90 49
2026-08-26 10:43	osmo1tp50…	669	C8288312CF2E850D534FFDD9B554DCBF20133FE5F1F35920963300F779C4A3 84
2026-09-03 03:24	osmo1kfzdt…	2,830	C265EC5D5E70C95E879C4874ECB7AAD97335D1592C15BA265C27242A6B3A9 1A1

All six are MsgSend, all to osmo129uhlqcsvmehxgzcsdxksnsyz94dvea907e575, all with memo 100603137. kfzdt paid 14,230 OSMO. tp50 paid 2,751 OSMO. Together 16,981 OSMO. The latest indexed payment is 3 September 2026, three weeks before this note.

Around those payments, osmo1tp50… was also swapping on Osmosis, including a swap out of alloyed ETH on 26 August 2026, and it added an authenticator on 14 June and again on 26 August. It claimed a delegator reward on 8 June. osmo1kfzdt… has other small swaps in the same index that do not go to the Binance address. The indexed history does not show either wallet paying cosmos1j8pp…, the 2024 ATOM deposit address, and it does not show either wallet touching 1r0ct, 1dl7, 1083 or 1zhm. So the 2026 activity extends the cash-in path. It does not, on this index, show the January theft wallets paying tp50.

What would close this

A fresh Binance disclosure for memo 100603137, and for user 11738338, would show whether osmo129uhl… is still user 53164342 and where the USDT went after the internal transfers. The 2024 order compelled disclosure of the two accounts Binance had already identified. It did not identify 11738338, because that user appears only in the production that came back.

7. The January theft did not use these two Binance accounts

Of the pleaded 1,513,833 dollars, the BitCanna line is 1,269 and the October TIA line is 200. Everything else, about 1.51 million dollars, leaves through the 1r0ct key on 7 January and the two Osmosis transfers on 30 January and 6 February. None of those coins appear in either Binance workbook. There is no TIA, SEI, STARS, NFT or large ATOM deposit on user 53164342 or user 800463342. The path below is the claimant's and Chainalysis's account, as exhibited. It was not re-traced from chain nodes for this note.

Phase I. Consolidate on Osmosis 1r0ct

• 21,810 TIA and then 10,000 TIA bridged from Celestia 1r0ct to Osmosis 1r0ct between 12 January and 8 February 2024. 40,000.588 TIA was still on Celestia 1r0ct on 7 May 2024. 71,810.596 minus 31,810 is 40,000.596, the difference being

fees.

- 145,498 SEI bridged from Sei 1r0ct on 19 January. 1 SEI left behind.
- 120 ATOM on 12 January and 21,654.063 ATOM on 8 February, from Cosmos 1r0ct to Osmosis 1r0ct.
- 15,000 OSMO received directly at Osmosis 1r0ct on 30 January. 18,999 OSMO received at Osmosis 1zhm on 6 February.
- 218,900.198 STARS and the Bad Kid NFTs stayed at Stargaze 1r0ct, on the affidavit's account. They were not bridged.

Phase II. Swap toward axlWETH, plus two small side wallets

The affidavit's component swaps, which it says happened on Osmosis, are 27,810 TIA into 211.4544186 WETH, 145,498 SEI into 51,721.68611 OSMO and then 37.770748 WETH, 21,774.05 ATOM into 124,874.471565 OSMO and then 83.98052357 WETH, and 14,940.951772 OSMO into 10.161731879 WETH. Those four WETH figures add to 343.37. The same affidavit then describes the amount bridged on to Ethereum as about 356 WETH. The papers do not reconcile the 13 WETH difference. On 31 January, 20 OSMO was swapped for 11.248193 AKT and sent to Akash 1y9y. On 1 February, 6 AKT came back to Notional's Akash 1083 address. The affidavit says the company does not know why. Also on 1 February, 10 OSMO went to Osmosis 1y9y and about 5.01 came back, leaving 4. On 3 February, 30 OSMO went to Osmosis 1q0w. Between 3 and 6 February, 16.45 OSMO went from 1q0w back to Notional's Osmosis 1083. Of what remained, 5 OSMO was swapped for 7.772664 USDT. Chainalysis's snapshot left 2.317886 OSMO and that USDT at 1q0w, and 4.248193 AKT at Akash 1y9y.

Phase III. Ethereum, then eXch

Chainalysis says the bridged ETH was consolidated at five addresses, of which three were primary. 0xbC882… also used 0x448De… and 0xcC708…. Through those three, about 54.77 ETH reached eXch. 0xE2240… and 0x758E5… deposited 160 ETH. The threat-actor total sent to eXch is stated as 214.771148 ETH. A footnote says only 202.7490618 ETH of that corresponds to Notional, and that about 12.022 ETH came from eXch itself.

Address	Role as described by Chainalysis
0xbC882735bedd79F247D407260C3db8E6f2184159	Primary consolidation. Sent on to eXch through the two addresses below.
0x448De027D77EB8c5D7fff3eE1DD2f33C79Dc5877	Used by 0xbC882.
0xcC70887dCd2715051866532931c5d50228DF3cd7	Used by 0xbC882.
0xE2240450744f67DD61289A6071c9E72411F20105	Primary. 25.396 ETH still there at the report date. Also an eXch depositor. Blocklist requested.
0x758E54d88BDAb00bE93e89800D894ffdfF0c63C5	Primary. 127.703 ETH still there at the report date. Also an eXch depositor. Blocklist requested.
0x6dC75C1b9F36C1e49c15c098e05DA6585715B037	Repeated landing address for the Axelar-to-Ethereum bridge, in the exhibited table.
0xdEFC7872051Ea8CB160157C23af51E18c013b1Fb	Received about 149.98 WETH from the bridge on 8 Feb 2024.

eXch told Chainalysis it does not keep IP addresses, browser data or other user metadata, and that it does not offer a direct fiat off-ramp. It did return Monero swap data for part of the flow. The disclosed swaps cover 47.74906175 ETH and pay out 713.0890314 XMR. The eight Monero addresses are printed, broken across lines, in Annex B of the 1 April 2024 letter at pages 115 and 116 of the Gadikian affidavit. They are not retyped here, because a line-broken base58 string is easy to corrupt. 202.7490618 minus 47.74906175 leaves 155.00 ETH of traced eXch deposits with no disclosed Monero output. The affidavit rounds that remainder to 154.99 ETH and says its location is unknown.

Chainalysis asked eXch, around 8 February 2024, to blocklist 0xE2240… and 0x758E5…. eXch said on 19 February that it had. Deposits from those addresses to eXch then succeeded on 25 February, 27 February and 3 March 2024. The 1 April letter treats the blocklist as having been lifted. The fourteen traced deposits into eXch, totalling the 202.7490618 ETH, are dated from 12 January to 3 March 2024. The deposit addresses on the eXch side, as printed in Table 19, are:

Date (UTC)	ETH	eXch deposit address
12 Jan 22:43	0.101	0x9db5Ec9C9cd5069558AEd75d6c62074575E1c082

27 Feb 13:49	20	0xAFC8584eC01eb359b360A808B02AB40836f25D3b
3 Mar 20:04	30	0xd13AB53fc338B5E7741977d2812ecC3ba4C48311
3 Mar 19:52	30	0x02551F6C344176911216a875d97f48BE7D7432d1
3 Mar 20:18	30	0x13748eEE5a0b912d197E5eac9CC09CD971D62b3F

Amounts are taken from Chainalysis Table 19 as reproduced in the affidavit. The two March rows at 19:52 and 20:18 follow the table even where the clock looks out of order.

Where the papers say value still sat on 7 May 2024

Asset	Where the affidavit puts it	What the Binance files change
40,000.588 TIA	Celestia 1r0ct	Nothing. Not in the workbooks.
4,000 TIA	Osmosis 1r0ct	Nothing.
1 SEI	Sei 1r0ct	Nothing.
STARS and the Bad Kids	Stargaze 1r0ct	Nothing, apart from the token-ID mismatch noted above.
4 OSMO	Osmosis 1y9y	Nothing.
2.317886 OSMO and 7.772664 USDT	Osmosis 1q0w	Nothing.
4.248193 AKT	Akash 1y9y	Nothing.
10 TIA	celestia1fd3…, called a Binance balance	Sold 31 Oct 2023. About 2.60 USDT left on user 800463342. 20.31 USDT had been paid to VietinBank account 105870482671.
10 TIA	celestia1cyl…, called KuCoin	No account file. KuCoin disputed the address.
152.5 ATOM	cosmos1j8pp…, called a Binance balance	Sold within five minutes on 23 Dec 2023. 1,706.64 USDT went to user 11738338. The account's later snapshot is about 6.70 dollars.
25.396 ETH	0xE2240450744f67DD61289A6071c9E72411F20105	Nothing in the workbooks.
127.703 ETH	0x758E54d88BDAb00bE93e89800D894ffdfF0c63C5	Nothing in the workbooks.
713.0890314 XMR	eXch payout, addresses in Annex B	No further hop in this folder.
about 155 ETH	Deposited at eXch, no Monero output disclosed	No further hop.

8. Connections that were looked for and are not in these files

• **The two Binance users do not share a device or an IP.** User 800463342 is a Galaxy Note 9 and one Mac Chrome session, four Hanoi IPs, used on 31 October and 1 November 2023 only. User 53164342 is an iPhone account open since October 2020, device name Jackie on the early handsets, 282 log rows in the export window, all iOS, all Hanoi, and a different set of IPs. Same city is not a link. Hanoi is also where Binance placed both of them, and it is where Notional's Vietnamese staff worked. It is not an identification.

• **Neither KYC name is an employee name in the affidavit.** The investigator had already said, on 23 January 2024, that the 152 ATOM name was not on the employee list. The workbook confirms the name he did not write down. It does not show a payroll, a shareholder or a staff-list hit for NGÔ TAT THÀNH or TRINH THI DINH.

• **Chaplin is not on a receiving address.** The README names Adam Christopher Chaplin. The affidavit's police chat names William Chaplin, a former employee omitted from a spreadsheet, and the investigator said that name was not the KYC name. No wallet in these files is attributed to either person.

• **osmo1t5qxhndxvqqla7axsxrmrc5l0z3hlaywvnt30f is a different wallet.** In the same chat it is offered as a possibly compromised wallet of a new hire, after a mistaken reference to Jack Zampolin. It is not 1r0ct, tp50, kfzdt, or a Binance deposit address in these records.

• **The January 1r0ct flow and the Binance pass-through are not shown to meet.** They share a case. They are not shown to share a transaction. Saying that tp50's later ATOM and OSMO are proceeds of the 7 January theft would go beyond the files and beyond the chain index that was available.

• **User 13718875 is a P2P buyer of record, not a shown participant in the transfer out of Notional.** That user published the advertisement that bought 20.31 USDT. The dong went to the VietinBank account in the name on user 800463342's profile.

• **Why we left.pdf does not identify a destination.** It alleges that validator income, including atoms associated with a proposal the letter calls prop 104, was kept off the company books, and that Ricardo described the company's assets as being used like a personal wallet. It names no address. The affidavit's own division of keys is the more precise document: Gadikian and Goncalves on one set, Long on the other, Du and Nhat on the BitCanna wallet.

9. What is still open

Lead	Why it is next	Where it stands in this folder
Binance user 11738338	Received 15,389.81 USDT internally from the account that cashed the BCNA proceeds, and sent 600 USDT back.	Not disclosed. Not named in the pleadings. Destination field on the transfers is TS9EohtikvfDXKVfEqS1VT6qJR2Nreoyj6.
Memo 100603137	Used on all six indexed 2026 OSMO payments into the 2024 deposit address.	Not resolved to a user. Needs a disclosure that post-dates the 2024 order.
0x29b671f938aed97d6f0a197a8a5b6e279ab0e5d7	Only on-chain stablecoin exit from user 53164342. 597 USDC on 27 Mar 2024, funded by the 600 USDT that 11738338 had just sent in.	Hash 0x2a2af21cd5f5b12421cbf70649650907bf43adb4fcd18c8f1b0e6a8867d2e2e9. No further hop in the folder.
osmo1tp50… / cosmos1tp50…	Paid the Binance account before and after the January theft, and paid the same deposit address in 2026.	Not linked on these records to 1r0ct or to a Notional wallet. 2024 chain history was not available from the nodes queried.
osmo1kfzdt…	2,000 OSMO in March 2024 and 14,230 OSMO across four indexed sends in 2026, same address, same memo.	Same limit.
TBA6CypYJizwA9XdC7Ubgc5F1bxrQ7SqPt	2,921 USDT into the pass-through account in mid-January.	No pleading, no second hop.
0xf099c6d4355f47e704564de5021619ea305b71ed	2,000 USDT in and 2,000 USDT straight out to 11738338 on 1 Feb.	Passed through the same day.
KuCoin and celestia1cyl…	The other 10 TIA.	KuCoin denied the address. No production.
eXch, the 155 ETH, and the 713 XMR	The end of the January theft as far as the papers go.	eXch said it holds no metadata. Monero outputs for 47.75 ETH are in Annex B. The rest is undisclosed.
celestia1c35… and the 9,008 TIA	Moved by Long and Du while employed, and not returned, on the affidavit.	Separate from the 20 TIA. Unbonding repeatedly cancelled by someone the company could not identify.
The futures gap of about 3,090 USDT	Spot proceeds with no withdrawal and an empty futures wallet.	Needs a futures blotter. Not in this production.

10. A short account of the two paths

Path A. The October test and the December BitCanna, which the Binance files now continue

On 31 October 2023, 9,030 TIA left celestia16dc… for celestia1xvxx…. All but 20 came back. Of the 20, ten went to a deposit address Binance later assigned, by memo 103763025, to a Hanoi account opened that afternoon in the name TRINH THI DINH. The ten TIA were sold for 22.78 USDT and 20.31 USDT was sold on Binance P2P for 499,849 dong, paid to VietinBank 105870482671. The account then spent the next day checking whether it could be deleted.

On 23 December 2023, 93,293 BCNA left bcna1dl7…, was swapped on the same key on Osmosis, and 152.5 ATOM reached Binance memo 103571931, user 53164342, an account open since 2020 in the name NGÔ TAT THÀNH. That account had, sixteen minutes earlier and from the same Hanoi IP, sent 0.1 ATOM to the wallet the stolen ATOM came from. It sold the ATOM and sent 1,706.64 USDT internally to Binance user 11738338. Over the next three and a half months the same account received 246 ATOM and 2,401 OSMO from the tp50 key, 2,000 OSMO from osmo1kfzdt…, and further USDT, ETH, DYM and TRX from addresses the pleadings do not contain, and it sent 15,389.81 USDT in all to user 11738338. About 3,090 USDT of spot proceeds never appears on a withdrawal. The spot snapshot in May 2024 is under seven dollars.

In June through September 2026 the same two outside wallets were still sending OSMO to that account's 2024 Osmosis deposit address, 16,981 OSMO in the transactions one public node currently indexes, every payment memo'd 100603137.

Path B. 7 January to early March 2024, which these two accounts do not touch

On 7 January 2024 the 1r0ct key took 71,810.596 TIA, 145,499 SEI, 218,900.198 STARS, eleven Bad Kid NFTs and 21,745.85 ATOM out of the 1083 key, in several cases in the same minutes as Notional's own recovery script. There had been a failed attempt to move the TIA about twenty seconds before the unbonded TIA arrived, which the affidavit reads as knowledge of the timing. Later, 15,000 and 18,999 OSMO left Osmosis 1083 for Osmosis 1r0ct and Osmosis 1zhm. The movable coins were consolidated on Osmosis, swapped toward wrapped ETH, bridged, and consolidated at 0xbC882…,

0xE2240… and 0x758E5…. About 202.75 ETH traceable to the theft reached eXch. Monero outputs are disclosed for 47.75 ETH. About 25.40 ETH and 127.70 ETH were still at the two Ethereum addresses when the report was written, and 40,000.588 TIA, the STARS and the NFTs were still on the 1r0ct key. That path is unchanged by the two workbooks.

Prepared from the files in this folder only, plus the Osmosis transactions cited in section 6, which were read from osmosis-rest.publicnode.com on 26 September 2026. Balances described as snapshots are the balances in the May 2024 Binance productions, not balances on the date of this note. Dollar figures in section 2 are the statement of claim's. This is a reading of those records. It is not a finding that any named person committed the transfers.
